DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

(1) the specifics of the liquid crystal device comprising a molecular initial alignment in the LC material having a parallel or almost parallel direction with respect to the alignment treatment direction for the LC material and where the LC material shows almost no spontaneous polarization which is perpendicular to the pair of substrate under the absence of externally applied voltage comprising a first embodiment corresponding to claims 1-7 and 30;

(2) the specifics of the liquid crystal device comprising a pair of polarizing films where one of the pair has a molecular initial alignment in the LC material having a parallel or almost parallel direction with respect to the alignment treatment direction for the LC material and the other of the pair has a polarizing absorption direction which is perpendicular to the alignment treatment direction for the LC material comprising a second embodiment corresponding to claims 8-14;

(3) the specifics of the liquid crystal device where the current passing through the pair of substrate shows substantially no peak-shaped current, when a continuously and linearly changing voltage waveform is applied comprising a third embodiment corresponding to claims 15-28;

(4) the specifics of the liquid crystal device where the LC material shows a bookshelf layer structure or quasi-bookshelf structure at the ferroelectric LC phase comprising a fourth embodiment corresponding to claim 29;

(5) the specifics of the liquid crystal device where each of the pair of substrate has a molecular alignment film having a thickness of 3,000 angstroms or more, which has been subjected to buffing alignment treatment so as to provide a contact length of the buffing alignment treatment of 0.3 mm or more comprising a fifth embodiment corresponding to claim 31.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2871

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Y. Wang whose telephone number is 571-272-2304. The examiner can normally be reached on M-F, 8 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 571-272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
